Agenda

- **Motivation for and scope of cross-border care**
 - Current status
- **Health systems information strategy**
- **Our approach**

Motivation for and scope of cross-border care

Motivation for and scope of cross-border care

Health systems information strategy

- Information about health systems is vital.
- The new strategy is required for developing information on health systems for the future.

SUCCESS ~ VISION

Mobility of citizens + Mobility of information

Our approach is based on signed Prague's Declaration

“We, the Ministers of Health,

Shall promote the collection, evaluation and regular exchange of comparable data on the migration of patients seeking cross-border health care, while respecting the structure of health care systems in the above mentioned countries so that appropriate measures are taken, in time, in cases when the health care system in a given country might be at risk.

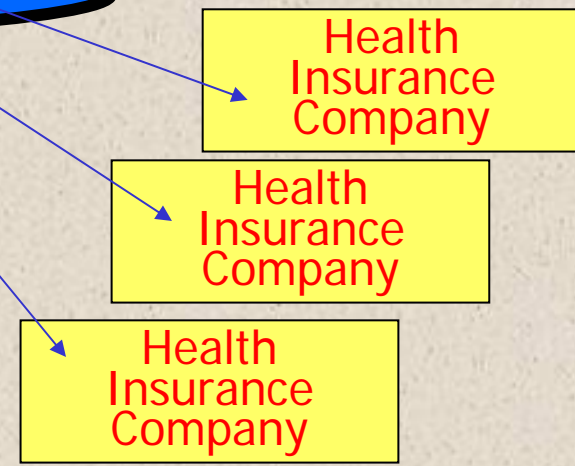

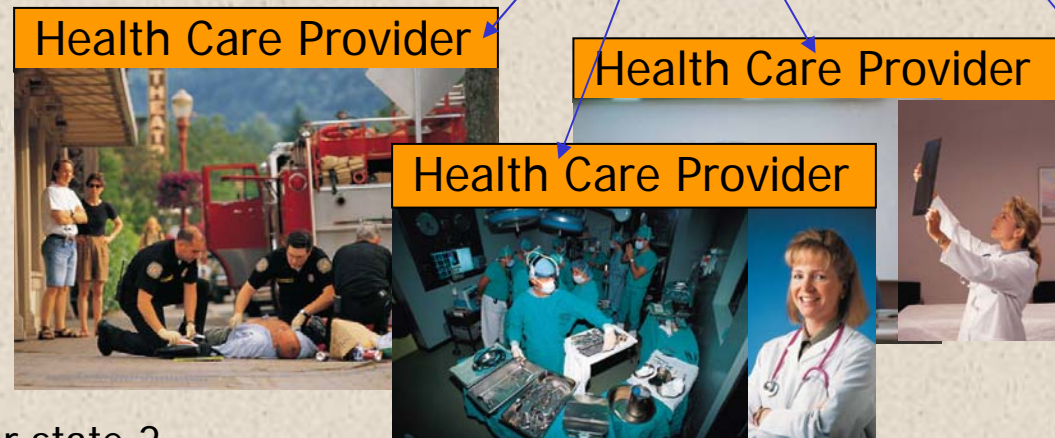

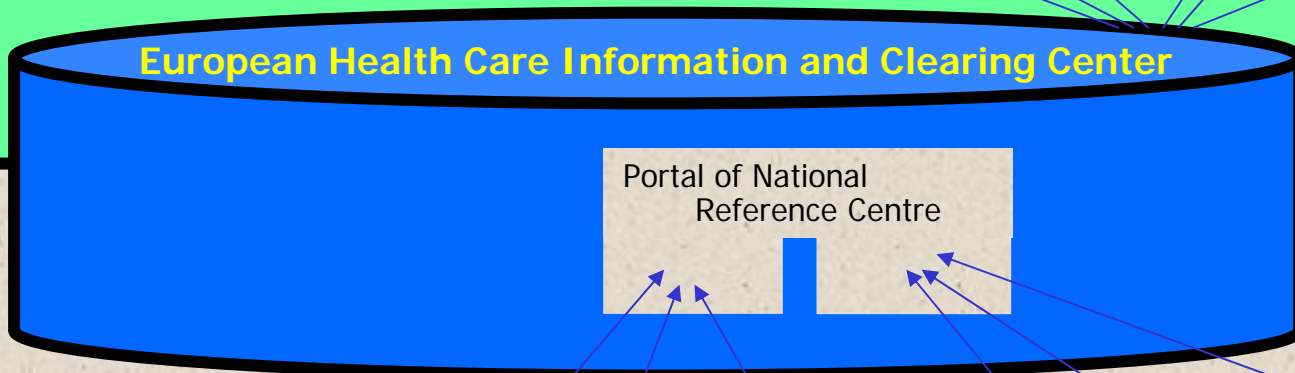

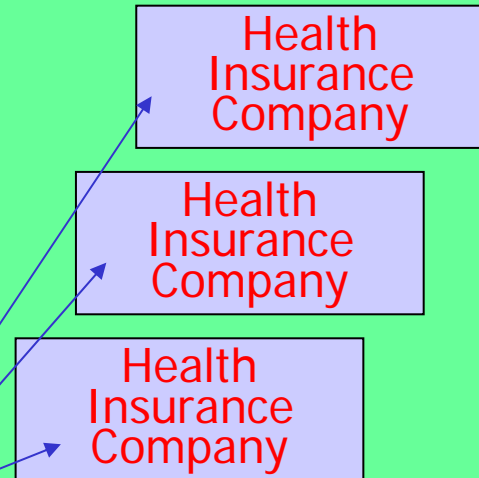

Shall contribute to creating a transparent, more effective and rapid process of reimbursement of the costs of health care provided in another member state while respecting the structure of reimbursement of the health care systems of the above mentioned countries through a centre providing information and clearing services.”

VISION

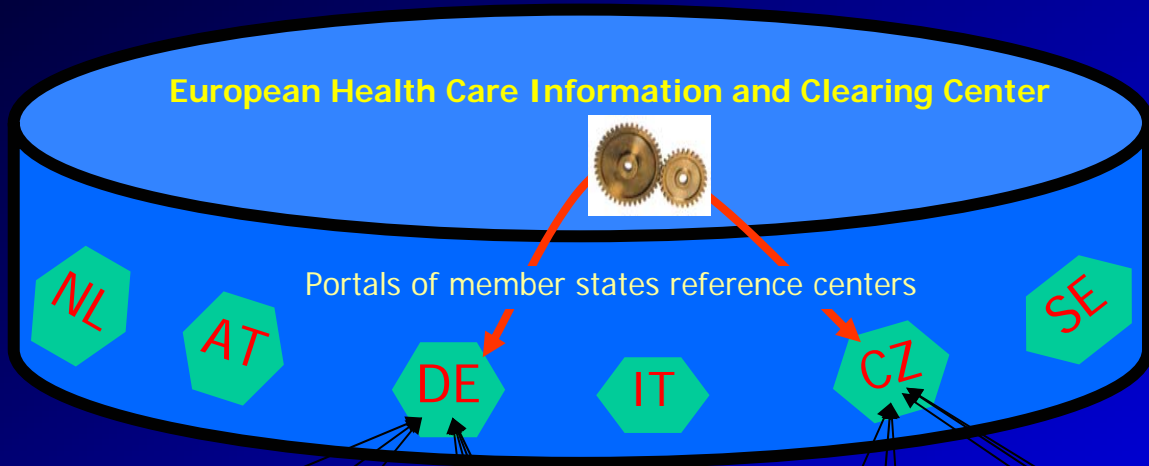

Aims of the European Health Care Information and Clearing Center:

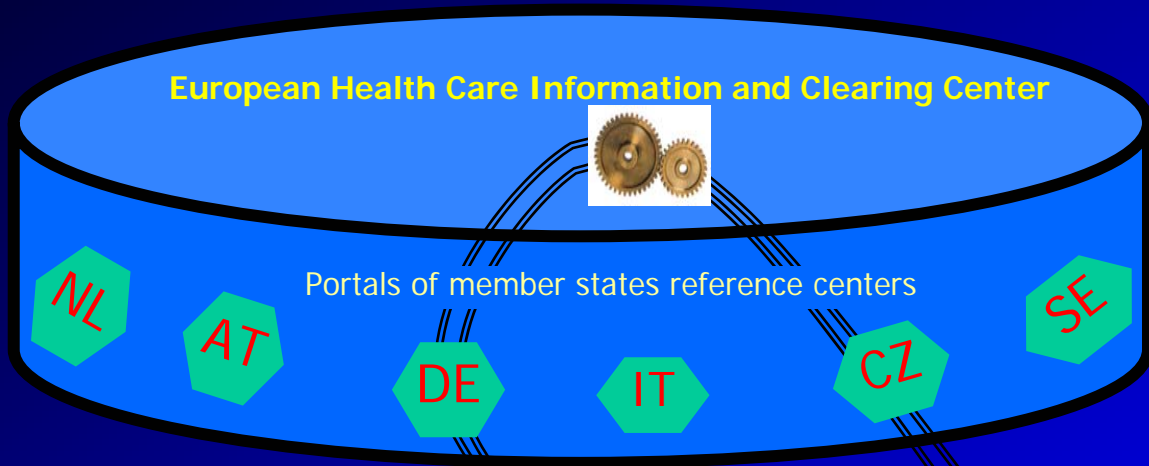

- To enable cross costs settlement by the provided health care between insurance companies and health care providers at the level of the whole E.U.
- To provide information support in the area of monitoring health care costs and quality
- To enable the structural benchmarking of both the consumption and prices of pharmaceuticals as the basis for the co-ordination of pharmaceutical policy in the E.U.
- To provide the right environment for the secure electronic transmission of health data
- To provide certification services for health professionals
